

# Firebase: the right choice for PaaS

How and why we migrated onto Firebase Hosting, Functions, and FireStore

First things first

# I'm right because...

1. This was my situation, not yours. The right choice for me may not be the right choice for you.
2. This presentation was created AFTER the switch. I would have made a very different presentation if things had worked out badly.
3. I'm not here to argue, if you don't like Firebase, that's ok with me, it's not the best solution for all situations. (for example, I would never recommend a Microsoft employee use it for an internal project).

# Hosting

# Why host on Firebase

- Firebase handles 100% of the hassle of serving over https
- Hosting static HTML sites on Firebase is as easy as hosting on any other server.
- Versioning and one-click rollback is built-in
- Content Delivery is “Google” fast

# Demonstration

Local static website

Init Firebase

Deploy to Firebase

# Firestore

# Firestore vs Realtime Database

Easier queries

Harder to get to your data

## Second point

Lorem ipsum dolor sit amet,  
consectetur adipiscing elit, sed do  
eiusmod tempor incididunt ut labore et  
dolore magna aliqua

Incididunt ut labore et dolore

Consectetur adipiscing elit, sed do  
eiusmod tempor incididunt ut labore et  
dolore magna aliqua

**XX<sup>0</sup>%**

Use this slide to show a major stat. It can help enforce the presentation's main message or argument.

# Final point

A one-line description of it

“This is a super-important quote”

- From an expert

This is the most  
important takeaway  
that everyone has to  
remember.

# Thanks!
